DETAILED ACTION

Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claim 17 is rejected under 35 U.S.C. 101 because the claim is directed to a recording medium storing nonfunctional descriptive material.

Data structures not claimed as embodied in computer-readable media are descriptive material per se and are not statutory because they are neither physical "things" nor statutory processes. See, e.g. Warmerdam, 33 F.3d at 1361, 31 USPQ2d at 1760 (claim to a data structure per se held nonstatutory) and merely claiming nonfunctional descriptive material stored in a computer-readable medium does not make it statutory. See MPEP 2106.IV.B.1.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 4. Claims 1, 4, 7, 12 and 17, are rejected under 35 U.S.C. 102(e) as being anticipated by Ohmura et al.

Application/Control Number: 10/810,716

Art Unit: 2621

Ohmura et al discloses a video apparatus that shows all the limitations recited in claims 1, 4, and 17, including the feature of a recorder for recording in the information recording medium said digital information for three-dimensional display with said digital information being arranged at the left and right frames at a speed which is "n" times as high as the speed for recording digital information on one frame for normal display in units of an error correction configuration and an information recording format, which correspond to the digital information on one frame for the normal display as specified in the present claims 1, 4, and 17. (See Ohmura et al's Figure 4, and claim 4).

With regard to claims 7, 12, the feature of the reproducer for reproducing digital information on left and right frames for three-dimensional display by reading the digital information on left and right frames out of the information-recording medium at a speed which is " n" times as high as a speed of reproducing digital information on one frame for normal display in units of an error correction configuration and an information recording format, which correspond to the digital information on one frame for the normal display as specified thereof is present in the cited reference of Ohmura et al. (See Ohmura et al' s Figure 9, and claim 13).

5. Claims 2-3, 5-6, 8-11, 13-16, are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Mayhew discloses an autostereoscopic image apparatus.
